Hardware — Physical controls on radio transmitter

↓

Inputs — Physical controls are mapped to software inputs. Weight, offset & curves can then be applied to the input.

↓

Mixes — Multiple Inputs can be combined. Weight, offset & curves can be applied to the mix. Mix is assigned to an output channel.

↓

Outputs — Final adjustment of data that will be transmitted from the radio on a channel. Endpoint and center values can be adjusted. Curves & subtrims can be added.
